becomes less efficient with age, with a decrease in both maximum cardiac output and heart rate.

As a person ages, heart valves may become thickened by fibrosis or calcification, leading to heart murmurs and less efficient pumping.

Heart functions begin to slow down with age. The aging process reduces the heart muscle strength. So its pumping power declines, and the maximal heart rate (the highest number of times your heart can contract in a minute) also decreases. When the amount of blood pumped by the heart in
