Biophilia Edward O Wilson

Wilson is a master storyteller, skillful at evoking exotic scenes."—Washington Post Book World "A fine memoir by one of America's foremost evolutionary biologists...erudite, elegant, and poetic. E. O. Wilson defines biophilia as 'the innate tendency [in human beings] to focus on life and lifelike process. To an extent still undervalued in philosophy and religion, our existence depends on this propensity, our spirit is woven from it, hopes rise on its currents.'

Biophilia: Wilson, Edward O.: 9780674074422: Amazon.com: Books

The biophilia hypothesis (also called BET) suggests that humans possess an innate tendency to seek connections with nature and other forms of life. Edward O. Wilson introduced and popularized the hypothesis in his book, *Biophilia* (1984). He defines biophilia as "the urge to affiliate with other forms of life".

Biophilia hypothesis - Wikipedia

"Biophilia" is the term coined by Edward O. Wilson to describe what he believes is humanity's innate affinity for the natural world. In his landmark book "Biophilia," he examined how our tendency to focus on life and lifelike processes might be a biologically based need, integral to our development as individuals and as a species.
