Some engines may take more turns or less turns but 5-7 is a base starting point. Please do not be afraid of tweaking this adjustment to find the "sweet spot" where the engine performs the best. Note: If all else fails there is an adjustment just above the inlet of the regulator called the Lock-off Adjustment (or zero governor adjustment).

Engine Will Not Start On Propane (Basic Troubleshooting ...

The company named their engines "Super 2s" because of their distinctive 2-cycle design that was said to create better air/fuel atomization from higher turbulence and also the elimination of loss of gas into the exhaust. Clark claimed a savings of 1/3 less gas than an "ordinary" 2-cycle engine.

Oil Field Engine News - Gas Engine Magazine

help move natural gas from station to station. At storage facilities, they are used to help inject the natural gas into high pressure natural gas storage fields. At processing plants, these engines are used to transmit fuel within a facility and for process compression needs (e.g., refrigeration cycles). The size of these engines ranges from 50 ...

3.2 Natural Gas-fired Reciprocating Engines

A gas engine is an internal combustion engine that runs on a gaseous fuel, such as coal gas, producer gas, biogas, landfill gas or natural gas. In the United Kingdom, the term is unambiguous. In the United States, due to the widespread use of "gas" as an abbreviation for gasoline (petrol), such an engine might also be called a gaseous-fueled engine or natural gas engine or spark ignited.

Gas engine - Wikipedia

These air cooled compressors with motor or gas engine drive produce cool dense gas filling more standard cubic meter of gas into each vehicle or trailer. Along with the complementary CNG accessories it is a single stop solution for the NGV station owners.
