The Honda K-series engine is a line of four-cylinder four-stroke car engine introduced in 2001. The K-series engines are equipped with DOHC valvetrains and use roller rockers to reduce friction. The engines use a coil-on-plug, distributorless ignition system with a coil for each spark plug. This system forgoes the use of a conventional distributor-based ignition timing system in favor of a ...

Innovative Honda design features, including an improved combustion chamber shape, advanced auto choke design, and easier fuel and oil filling, make the GCV200 engine convenient to use and operate. The new engine is more streamlined and more compact than other engines in the same class, while the configuration of the Honda GCV200 incorporates the CycloFlow design, which strengthens turbulence in the cylinder and provides more stable combustion.
