PTI-DC45.1 | Recommendations for Stay Cable Design ...

Description. New! PTI DC35.1-14: Recommendations for Prestressed Rock and Soil Anchors. This publication represents the current state of the art in the design and construction of permanent and temporary prestressed rock and soil anchors using high-strength prestressing steel.

PTI DC35.1-14: Recommendations for Prestressed Rock and ...

The second significant difference between PTI and fib is the elongation requirement for the subsequent tensile test. Fib specifies an elongation of 1.5% at the maximum load, while PTI does not have a specified elongation. In many cases, bridge designers specify a combination of testing procedures from both the PTI and fib guidelines.

BRIDGE RESEARCH: Gaining acceptance | Roads & Bridges

Updates and additions to the PTI DC45.1-12, Recommendations for Stay Cable Design, Testing and Installation, include several significant additions and updates, such as the strength resistance factors including extradosed stay systems, fire resistance qualification testing details and cable loss due to fire provisions, wind loads and cable galloping provisions, fatigue and static strength testing requirements, HDPE pipe requirements, and some other updates.
